About Me

Fullstack Developer with 3+ years of experience building performant, responsive web applications. specialized in the **React**, **NextJS** and modern content management architectures (**AEM Franklin**, **Hugo**). Passionate about bridging the gap between design and engineering, while utilizing strong proficiency in backend technologies to architect and deploy complete, full-stack solutions.

EXPERIENCE

Web Developer

June 2022 – February 2026

Tata Consultancy Services

Hyderabad

- * Built and optimized responsive user interfaces for a leading airline client, utilizing **React** and **JavaScript** to improve cross-browser compatibility and reduce UI-related bugs by 30%.
- * Developed reusable UI components and layouts with the **Next.js** App Router, reducing development time and maintaining consistency across multiple pages.
- * Engineered highly responsive, data-intensive user interfaces for enterprise clients, leveraging React, TypeScript, and Redux to centralize complex global state and reduce state-mismatch bugs by 25%.
- * Led the migration of legacy WordPress sites to **AEM Franklin**, reducing page load times by 40% and streamlining the content publishing workflow for the marketing team for a Pharma client.
- * Engineered modular and reusable **Hugo** templates to accelerate development velocity, establishing a standardized codebase that reduced future maintenance time by 30%
- * Integrated frontend applications with RESTful APIs and AI models, ensuring seamless data handling and optimistic UI updates.
- * Engineered modular and reusable **Hugo** templates to accelerate development velocity, establishing a standardized codebase that reduced future maintenance time by 30%
- * Architected a production-grade **RAG** platform using **LangChain** and **OpenAI** to enable high-precision, context-aware QA across large-scale PDF documentation. I designed the end-to-end ingestion and vector retrieval pipeline with Node.js and React, significantly reducing model hallucinations and improving response latency.
- * Actively participated in various **AI-Hackathons**, sessions and initiatives conducted by the company, staying up to date with emerging trends and technologies

PROJECTS

API Accio | [Live Demo](#) | [Source Code](#) | *Next.js, TypeScript, Postgres, Drizzle ORM, Gemini AI, Redis*

- Engineered a full-stack AI-powered development tool using Next.js and TypeScript, enabling developers to instantly provision mock API endpoints via natural language prompts.
- Integrated the Google Gemini API to parse user requirements and autonomously generate highly contextual JSON data structures for immediate frontend consumption.
- Implemented a RAG based data generation system using Gemini embeddings to provide contextual grounding for AI-generated API endpoints. Improved output quality by developing a vector-based search to dynamically retrieve and inject relevant JSON schemas into the generation prompt.”
- Architected a scalable backend data layer utilizing PostgreSQL and Drizzle ORM to persistently store, fetch, and serve generated mock data schemas with minimal latency.
- Implemented robust API security by integrating Upstash Redis to enforce strict IP-based rate limiting, protecting resource-intensive generation routes from abuse.

URL Shortener | [Live Demo](#) | [Source Code](#) | *ExpressJS, React, Postgres, JWT, Drizzle ORM*

- Built a full-stack URL shortener with React (Vite) frontend and Node.js/Express backend, using PostgreSQL + Drizzle ORM.
- Implemented secure session management with HTTP-only JWT cookies, unique code generation via nanoid, redirect handling, and CRUD for links.
- Deployed for production with CORS, cookie settings for cross-origin, and health checks.

TECHNICAL SKILLS

Core Frontend: HTML5, CSS, JavaScript, Typescript

Frameworks & Libraries: React.js, Next.js, Redux Toolkit, Zustand, AEM Franklin, Hugo, Tailwind, Bootstrap

Developer Tools: Git, Cursor, Copilot, Vite, Figma

Backend: Node.js, Express, REST APIs, SQL, JWT, Integration with MongoDB and Postgres

AI/LLM: OpenAI Integration, RAG, Ollama, Langchain, Vector DB

EDUCATION

Gokaraju Rangaraju Institute of Engineering and Technology

Bachelor of Technology in Computer Science

Hyderabad

2018 – 2022
